AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A digital camera comprising: an optical lens system providing an optical image,

an image sensor sensing simultaneously multi-color pixel data corresponding to said optical image;

an input device configured to respond to a manual input selecting one of a plurality of image filters; and

a processor configured to process said pixel data in response to said selected image filter to provide filtered image data.

- 2. (Original) The digital camera of claim 1 further comprising: a display configured to provide a visual display of said filtered image data; and where the input device is a touch sensitive overlay provided on said display.
- 3. (Original) The digital camera of claim 1 further comprising: an image storage configured to implement lossy compression of said filtered image data to provide compressed image data, and store said compressed image data.
- 4. (Original) The digital camera of claim 1 wherein the image sensor is a color Charged Coupled Device array (CCD).
- 5. (Original) The digital camera of claim 1 wherein the input device includes menued options.
- 6. (Original) The digital camera of claim 1 wherein the input device include a voice processor configured to respond to voice commands.
- 7. (Original) The digital camera of claim 1 wherein a subset of said plurality of image filters are selectable by said input device and said processor is configured to provide a composite filter effect in response to selected ones of said subset.

8. (Previously Presented) An apparatus for recording digital images comprising: a graphic user interface menu displaying a selection of a filter effect available on a digital visual recording device;

a processor configured to perform an adjustment of the properties of said digital visual recording device to include selected ones of said filter effects;

an image sensor sensing simultaneously multi-color pixel data; and an output providing an electronic representation of a filtered image obtained from said image sensor.

- 9. (Original) The apparatus of claim 8 wherein said menu is configured to provide a hierarchical display of said filter effects.
- 10. (Original) The apparatus of claim 8 wherein said processor is configured to provide a preview of a filtered image.
- 11. (Original) The apparatus of claim 8 wherein said output includes a removable data storage media capturing said electronic representation.
- 12. (Original) The apparatus of claim 8 wherein said filter effects include one of effects filters, technical filters and correction filters.
- 13. (Original) The apparatus of claim 8 wherein said filter effects include variations in color intensity.
- 14. (Original) The apparatus of claim 9 wherein said processor selectively inhibits said filter effect in response to said input.

15. (Previously Presented) A method of combining filter effects into digital photography, said method comprising:

selecting a first filter on a digital recording device;

selecting a second filter on the digital recording device;

combining said first filter and said second filter to create a combined filtering effect; adjusting properties of said digital recording device to include combined filtering effects;

generating an image comprising multi-color pixel data sensed simultaneously; and recording said image on an electronic media of said digital visual recording device which includes said combined filtering effects.

- 16. (Previously Presented) The method of claim 15 wherein said selecting is accomplished through a hierarchical menu, available before said image recording.
- 17. (Previously Presented) The method of claim 15 wherein said adjusting properties of said digital recording device includes providing a preview of said image which includes the filter effects.
- 18. (Previously Presented) The method of claim 15 wherein said recording includes recording onto a removable electronic data storage media.
- 19. (Original) The method of claim 15 wherein said filter effects include one of effects filters, technical filters, and correction filter.
- 20. (Original) The method of claim 15 wherein said effect filters include variations in color intensity.

- 21. (New) The digital camera of claim 1, wherein said processor processes a user selected portion of said pixel data in response to said selected image filter to provide filtered image data.
- 22. (New) The apparatus of claim 8, wherein said graphic user interface further displays a set of options for selecting portions of said multi-color pixel data upon which to apply said filter effect.
 - 23. (New) The method of claim 15 further comprising: selecting a first portion of said image upon which to apply said first filter; and selecting a second portion of said image upon which to apply said second filter.
 - 24. (New) The method of claim 15 further comprising: selecting any number of filters on the digital recording device; and

combining said any number of filters with said first filter and said second filter to create said combined filtering effect.
